EGG PRODUCTION

Technical Description

- Monitor the temperature, humidity, negative pressure, carbon dioxide and other data in chicken house in real time, and alarm in time when there is abnormal data in the house.
- The environment control carries out full automatic control of poultry house based on the built-in parameters, which can be modified according to personal breeding requirements.
- Fine ventilation by 36 groups ventilation levels, 22 groups fans and cooling function.
- With three-section air inlet control, it can realize three-section segmented control in chicken house.
- Day and night temperature adjustment function can adjust the temperature in chicken house according to outside temperature.
- Industrial - grade touch screen, 40 - way dry contact, powerful, reliable operation.
- Smart gateway real-time communication, data can be uploaded to the cloud server, to achieve multi-terminal data sharing, breeding online.
